Ordo — User & Setup Guide

Marketing Automation for Magento Open Source

This is the setup guide submitted with Ordo's Adobe Commerce Marketplace listing. It is the source for `Ordo-User-Guide.pdf` (generated by `generate-pdf.py` in this directory) — edit this file, then regenerate the PDF, rather than editing the PDF directly.

For full feature-by-feature documentation, see the GitHub Wiki — this guide covers installation, configuration, and a feature overview, then links out to the wiki page for each feature.

Overview

Ordo is a full campaign automation engine (trigger → conditions → actions) that runs directly inside stock Magento Open Source — no Adobe Commerce B2B license, no per-contact marketing-automation subscription. Triggers are computed from data Magento already has (orders, quotes, customers, carts), or from a small first-party data model Ordo adds alongside it.

It covers both classic B2C lifecycle automation (abandoned cart, win-back) and B2B triggers most external marketing-automation tools can't see at all — credit limit alerts, order approval workflows, reorder reminders — because they never had access to that data.

Requirements

- PHP 8.3, 8.4, or 8.5
- Adobe Commerce / Magento Open Source 2.4.8 or 2.4.9
- Frontend theme: Luma/blank, or Hyvä. Every storefront-facing piece (tracking snippet, Web Push

service worker, popup/notification/survey widgets, the "My Offers" account page) is vanilla JavaScript and plain server-rendered HTML with no Luma-specific JS dependency, so it works on Hyvä without a separate compatibility module. If your Hyvä theme purges unused Tailwind classes at build time, add this module's `view/frontend` directory to its `tailwind.config.js` `content` array.

Installation

```
composer require michalper/ordo
bin/magento module:enable Ordo_Automation
bin/magento setup:upgrade
bin/magento cache:flush
```

Configuration

Every feature has its own on/off switch under **Stores** → **Configuration** → **Ordo Automation** — each is off by default until enabled, and each has its own scheduled cron job. If a feature "isn't doing anything," the first thing to check is its own config toggle, not a shared master switch (there isn't one).

Feature Guide

B2B

Feature	What it does	Full guide
Reorder reminders	Reminds a customer to reorder based on their own purchase history	Reorder Cycles
Offer/quote expiry reminders	Reminds a customer before a quoted offer expires	Campaigns
Credit limit alerts	Warns a customer approaching their credit limit, with an optional hard checkout block at 100%	Dashboard
Order approval workflow	Holds orders above a per-customer spend limit for a token-based admin approve/reject email	Order Approval
Free gifts	Automatic gift once a cart crosses a spending threshold, with cascading tiers	Free Gifts

B2C

Feature	What it does	Full guide
Abandoned cart recovery	Recovers abandoned carts by email, capped per cart	Campaigns
Welcome email	Sends on customer registration	Campaigns
Win-back / re-engagement	Emails a customer after N days of inactivity, self-clears once they order again	Campaigns
SMS recovery (Twilio)	`send_sms` campaign action with delivery-status tracking and opt-out handling	Campaigns
WhatsApp (Meta Cloud API)	`send_whatsapp` campaign action with its own template approval lifecycle	Campaigns
Web Push notifications	`send_push` campaign action, real browser/OS notifications to every subscribed device	Tracking & Popups
Price-drop / back-in-stock alerts	A customer or visitor watches a product; alerts fire on the first real change	Tracking & Popups

Shared foundation

Feature	What it does	Full guide
Campaign engine	"When X happens and Y is true, do Z" rule engine, with a visual Flow builder	Campaigns

Feature	What it does	Full guide
Segments	Saved, reusable customer groups	Segments
RFM & lead scoring	Identifies your best customers and why	RFM & Lead Scoring
Customer 360	Everything about one customer on one screen	Customer 360
Referral program	Referral codes and reward triggers	Referral Program
Email template versioning	Undo a broken template edit	Email Template Versioning
On-site behavior tracking	A dependency-free JS snippet turning page/product/category views into campaign-engine tags	Tracking & Popups
AI-agent commerce readiness (GEO)	Feed, manifest, and pricing exposure for AI shopping agents	AI-Agent Commerce Readiness
